Christopher Hacia

Lead / Senior Web & Software Developer / Engineer

Just because I have leadership skills and years of overall experience... It does not mean I am no longer capable of adapting and growing further. It instead nurtures my ability to do so.

MySQL, HTML

Blackline Safety / Software Engineer

May 2022 – March 2024, Calgary, Alberta, Canada (Remote).

Developing and maintaining systems in node, socket.io, Angular, Python, PHP, and MySQL, AWS Lambda. Utilizing node across several project repositories to build, and maintain said projects. Also using node in various capacities to build backend processes needed to manage data and generate reports.

Contingent Worker via Pyramid Consulting Facebook / Software Engineer III

October 2021 – April 2022, Remote. (Contract)

Working in the internals tier I am developing tooling for Ownership and management for files, process, and more. Utilizing React.js, GraphQL via Relay.js, Flow.js and PHP

Cognizant / Software Engineer

April 2021 – October 2023, Remote. (Contract)

Wells Fargo Bank. I worked on the Investor Guidance Team building features within the software to enhance the user experience and flow. Working on ADA features as well. Primarily coding with jQuery and JAVA.

Contingent Worker via Pyramid Consulting **Intuit** / Software Engineer II

April 2020 – April 2021, Remote. (Contract)

At Intuit I worked with the Quickbooks ProAdvisor Accountant team in my time with Intuit I have run the gamut of engineering from building out new features and components with ReactJS and GraphQL to refactoring old code into ReactJS components. As well as supporting the product by finding and fixing bugs and security issues there in. Utilizing Jest to create unit tests and esLint to ensure uniform and quality code therein.

Contingent Worker via Pyramid Consulting **Walmart Labs** / Senior Software Engineer & Developer

September 2019 - April 2020, Sunnyvale, CA. (Contract)

Working with the Account-Post Transaction Team on *walmart.com*, I work with Hapi.js, Node.js, ReactJS, Redux, and GraphQL primarily. To build, maintain, and enhance the existing user experience of a user's account, and transaction history needs. I also build out end to end automation using Nightwatch.js (a node-based selenium web driver framework). So that we can maintain regression testing in our CI/CD Pipeline. Which primarily consists of Git and Jenkins. I mainly work on the Front End and Proxy layer.

Cisco / Senior Software Engineer & Developer

June 2019 - September 2019, San Jose, CA. (Contract)

Working with the DNAC team, I developed an automated end to end testing suite for internal use, using CodeCeptJS. Built out and enhanced the functionality of client-facing tooling. Using NodeJS, ExpressJS, MongoDB, jQuery, ReactJS, and Redux to develop new features and enhance existing ones on the customer-facing platform for DNAC. As well as redeveloped the middleware of the end to end communications from server to client with Axios.js. All on top of using CSDL (Cisco Secure Development Lifecycle) to ensure the best quality code.

Guardian Alliance Technologies / Lead & Senior Software Engineer Full Stack Developer

September 2017 - April 2019, Stockton, CA.

Built from the ground up utilizing Codnigiter & Symfony PHP MVC Frameworks a software as a service application designed to help investigators conduct background investigations on applicants in the public safety sector. The deployed services are FedRamp compliant and CJIS Certified. While here I have managed 2 sets of development teams in parallel one local and one offshore along with a QA team. In my time here I also help run Support. I also managed the services architecture from the server level up. Exposure to AWS EC2, S3, and Glacier. EC2 I spun-up and managed small clusters of servers for the development, staging and production environments.

MindSlap / Lead & Senior Software Engineer Full Stack Developer

August 2016 – September 2017, Stockton, CA

Across several platforms I have built, enhanced, or maintained older projects, from various companies and clients. Using Codigniter, Zend Framework, Wordpress CMS, and various other frameworks I developed and managed several projects and teams.

Zetta, Inc. / Senior Software Engineer Full Stack

April 2012 - July 2016, Sunnyvale, CA

Focusing on the front end of the tech stack I helped rebrand, develop, and enhance the features of a cloud based service that served in the Backup and Disaster Recovery sector. Primary Stack consisted of Zend Framework and ReactJS

fanmeetr / Lead Architect & Engineer (Sep 2011 - Dec 2012)
ZettaSet / Senior Software Engineer / Full Stack (Aug 2011 -Feb 2012)
UpMo / Senior Software Engineer / Full Stack (Apr 2011 – Jun 2011)
